PROFESSIONAL SUMMARY

Final-semester Computer Engineering student at Instituto Tecnológico de Costa Rica (TEC), seeking a professional internship starting early 2027. Full-stack developer with hands-on experience in React, Node.js, TypeScript, and PostgreSQL, plus a foundation in C++, Java, networking, and cloud fundamentals (AWS, Azure). Comfortable working across the stack, from REST API design to UI implementation, with a strong focus on writing clean, well-documented code.

TECHNICAL SKILLS

- Languages & Frameworks: JavaScript, TypeScript, React, Node.js, Express, Tailwind CSS
- Also proficient in: Python, Java, C++ (coursework and academic projects)
- Databases: PostgreSQL, MySQL, Supabase
- Cloud & DevOps: AWS fundamentals, Microsoft Azure (DevOps learning path in progress), Docker
- Other: REST API design, Git/GitHub, networking fundamentals (Cisco Packet Tracer: VLANs, OSPF, RIP, DHCP)
- Soft skills: Team collaboration, communication, adaptability, autonomy, empathy, flexibility
- Languages: Spanish (native), English (intermediate, B1–B2)

PROFESSIONAL EXPERIENCE

Full-Stack Developer | Lumentech

2026 (1 month)

Project: QCarne — ticket and administration system for a meat products retail company

- Developed backend and frontend for the ticket administration module
- Implemented a code generation feature for supervisors
- Built an action history tracking module
- Developed full CRUD functionality for worker management

Full-Stack Developer | Instituto Tecnológico de Costa Rica (Academic Client Project)

2026 (3 months)

Project: Workshop Management System (SGTM) built for a real auto repair shop client

- Built the vehicle intake flow, capturing customer comments and mechanic diagnostics
- Implemented repair and parts-tracking features with automatic cost calculation
- Developed a PDF generation feature to deliver itemized cost estimates to clients
- Stack: Next.js, Express, TypeScript, Supabase; deployed frontend on Vercel and backend on Seenode

PERSONAL PROJECTS

Service Marketplace Platform | Personal Project

Node.js, MySQL

- Designing a marketplace connecting clients with service technicians (plumbers, electricians, etc.)
- Built a flexible appointment scheduling system
- Focused on well-documented REST APIs and database-level business logic (views/stored procedures)

Operating System Simulator & File System | Academic Project (Java)

- Built a memory management simulator supporting paging, fixed/dynamic partitioning, and overlays
- Implemented multicore process scheduling
- Developed a file system with contiguous block allocation, FCBs, superblock, MBR, and bitmaps
- Built a terminal interface supporting Unix-like commands (mkdir, ls -R, rm -R, chmod, etc.)

EDUCATION

CERTIFICATIONS

- Scrum Master Certification / Agile Scrum Certification — Udemy, March 2026
- AWS for IT Professionals — LinkedIn Learning, February 2025
- Soft Skills and Leadership Program — Mejoremos Costa Rica, October 2022 (15 hours)
- In progress: Microsoft Azure DevOps Learning Path
- In progress: AWS Essentials — Building High-Availability Architectures
