PROFESSIONAL SUMMARY

Final-semester Computer Engineering student at Instituto Tecnológico de Costa Rica (TEC), graduating June–July 2027 and seeking a professional internship starting early 2027. Full-stack developer with hands-on experience in React, Node.js, TypeScript and PostgreSQL, plus a foundation in C++, Java, Linux, networking and cloud fundamentals (AWS, Azure). Comfortable working across the stack, from REST API design to UI implementation, with a focus on clean, well-documented code.

TECHNICAL SKILLS

Languages & Frameworks: JavaScript, TypeScript, React, Next.js, Node.js, Express, Tailwind CSS

Working knowledge: Python, Java, C++ (coursework and academic projects)

Databases: PostgreSQL, MySQL, Supabase

Cloud & DevOps: AWS fundamentals, Microsoft Azure (DevOps learning path in progress), Docker, Git/GitHub

Systems & Networking: Linux (Pop!_OS as daily development environment), GDB, Cisco Packet Tracer (VLANs, OSPF, RIP, DHCP)

Other: REST API design, Agile/Scrum

Languages: Spanish (native), English (intermediate, B1–B2)

PROFESSIONAL EXPERIENCE

Full-Stack Developer | Lumentech

2026 (1 month)

QCarne: loyalty and ticket management system for a meat products retailer. Customers are identified by their national ID; once the minimum purchase is met, the cashier registers a stamp and the customer can check from their phone, instantly, which stamp they are on and their next redeemable discount.

- Developed the backend and frontend of the ticket administration module.
- Implemented a code generation feature for supervisors.
- Built an action history tracking module.
- Developed full CRUD functionality for worker management.

Full-Stack Developer | Instituto Tecnológico de Costa Rica (Academic Client Project)

2026 (3 months)

Workshop Management System (SGTM) built for a real auto repair shop client.

- Built the vehicle intake flow, capturing customer comments and mechanic diagnostics.
- Implemented repair and parts tracking with automatic total cost calculation.
- Developed a PDF generation feature to deliver itemized cost estimates to clients.
- Stack: Next.js, Express, TypeScript, Supabase; frontend deployed on Vercel and backend on Seenode.

PROJECTS

Operating System Simulator & File System | Academic Project (Java)

- Built a memory management simulator supporting paging, fixed/dynamic partitioning, and overlays.
- Implemented multicore process scheduling.
- Developed a file system with contiguous block allocation, FCBs, superblock, MBR, and bitmaps.
- Built a terminal interface supporting Unix-like commands (mkdir, ls -R, rm -R, chmod, etc.).

EDUCATION

Bachelor's in Computer Engineering | Instituto Tecnológico de Costa Rica (TEC)

Expected June–July 2027

CERTIFICATIONS

- Agile Scrum course (Udemy), March 2026
- AWS Essentials: Building High-Availability Architectures, August 2026 (15 hours)
- AWS for IT Professionals (LinkedIn Learning), February 2025
- In progress: AWS Developer Learning Plan
